- Please ensure that you are fully aware of the code
- Please ensure to use the mysql or any no sql database but not in memory database
- Please have the unit test cases written for your code
- Finally, the description or in a file, please explain all the pain points and learnings that have encountered or experienced during this assignment
- Please feel free to add more API's and also database columns if you feel there existence needed for some purpose

Expectations from this assignment

- This is should be the best code out there in the internet
- Please google out/chatgpt the best practices and implement them both on function and non functional stand point
- You should be aware of each and every line of code - why, how, why only this way, what are other ways etc.,
- Please list down all the best practices so that you won't forget

- Make commits to github very frequently with appropriate commit messages - don't push the entire code in single shot
- Make sure you test everything end to end before submitting
- Last and final, please ensure to give your best
